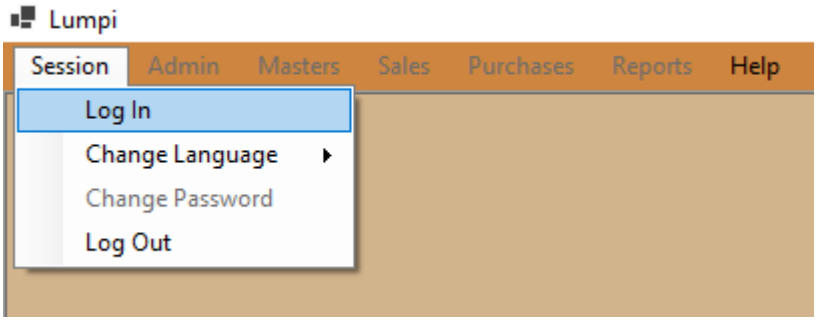
As soon as the system starts, the following screen will be displayed, which is the main menu:

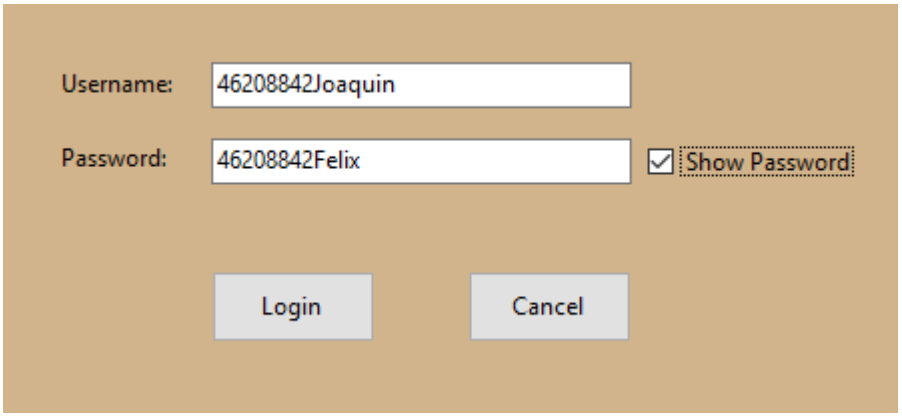
To start using the system, go to the top left to the section called "Session," which is the only one that is unlocked, and log in as indicated below.

- ## Session

After tapping on the “Session” section in the top bar, the following options will appear:

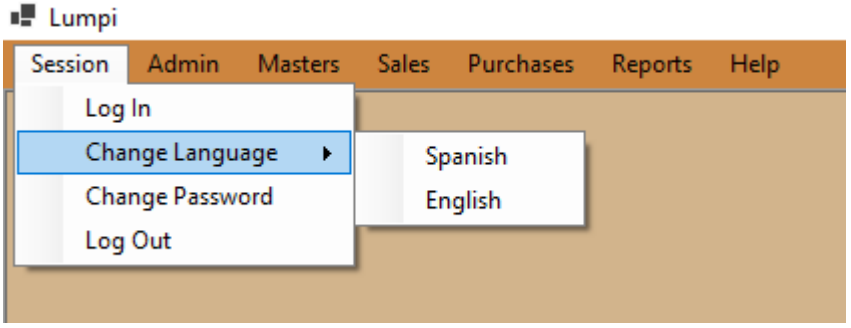


- Login:



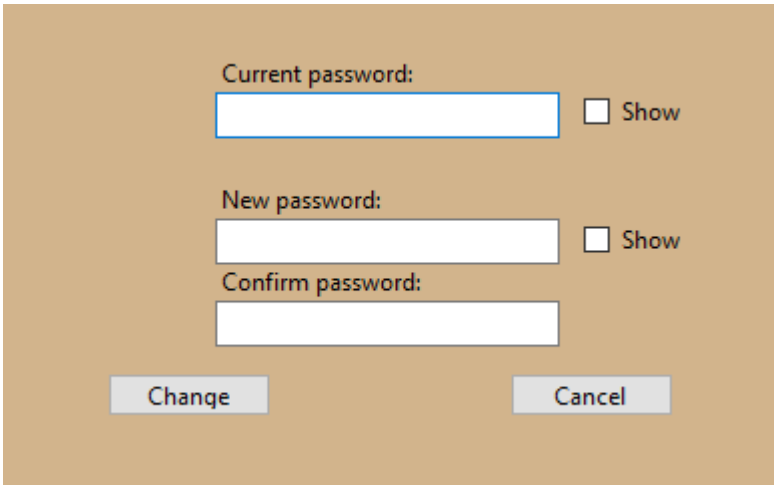
The first time a registered user logs into the system, the default credentials are: Username: National Identity Document (DNI) and First Name (all together), and Password: National Identity Document (DNI) and Last Name, as shown in the example with DNI: 46208842 and First Name: Joaquin.
Once logged in, the main menu will reload, but the sections corresponding to the user's role will be activated in the top bar, in this example, all sections will be activated because the role is SuperAdmin.

- Change Language:



From the "Change Language" section, another list opens so you can select the language you want to use for the entire system.

- Change Password:

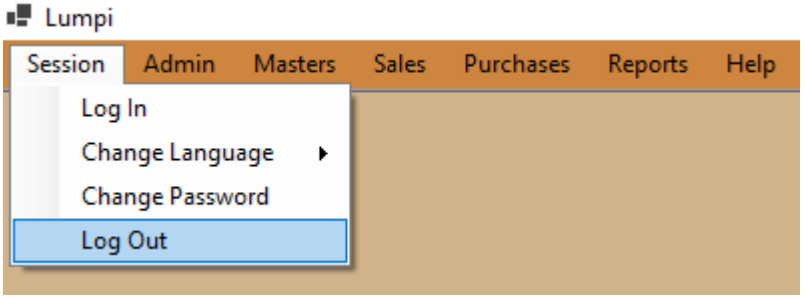


To change your password, you must complete the requested information, taking into account the following points:

- Your current password must match your existing password.
- Your new password cannot be the same as your current password.
- Your password confirmation must match the new password you entered.

Once you have decided on your new password, select the change button, confirm that you want to change the password, and the system will close the session, and you will need to log in again.

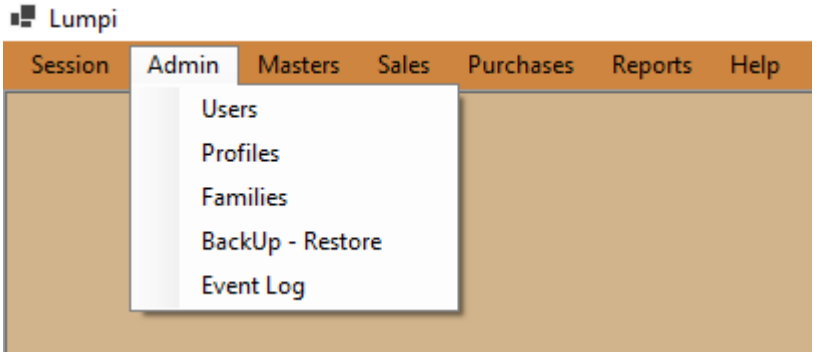
- Sign Out:



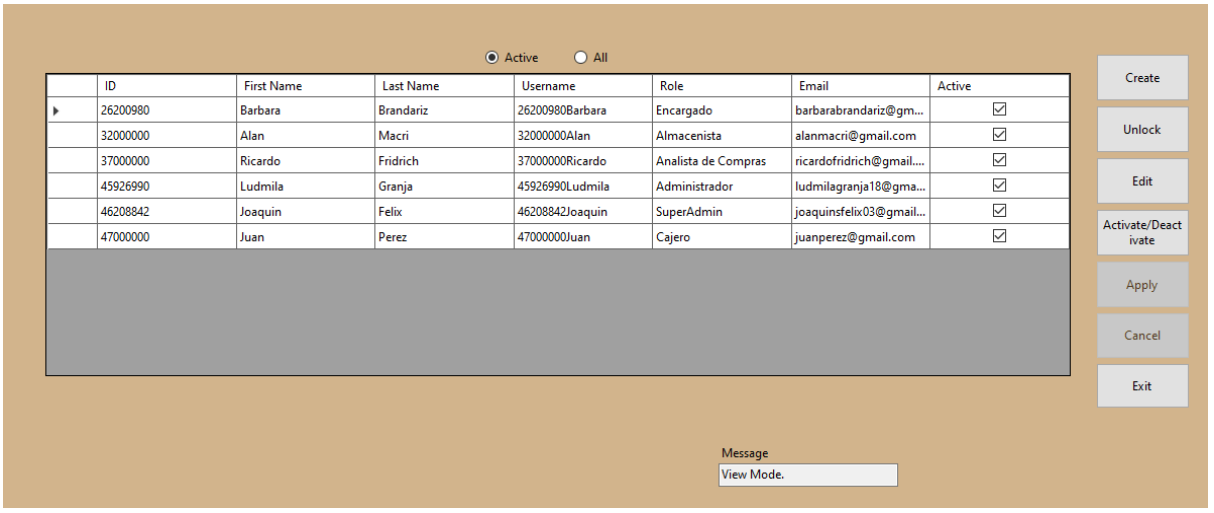
To log out, press the "Log Out" button. The system will ask for confirmation; once you confirm, the system session will close.

- Admin

If your role is "Administrator", you will be able to enter the "Admin" section where you will find the following options displayed.



- Users:



This section allows you to perform all user administration operations, including adding, deleting, and modifying user accounts.

This screen displays a grid with all users. Using the controls at the top, you can toggle between viewing only active users and viewing all users.

- Create user: Pressing the "Create" button will disable all other buttons except "Apply," "Cancel," and "Exit." New controls will then appear in the lower left corner, allowing you to enter the new user's information. After completing the fields, press the "Apply" button to save the new user.

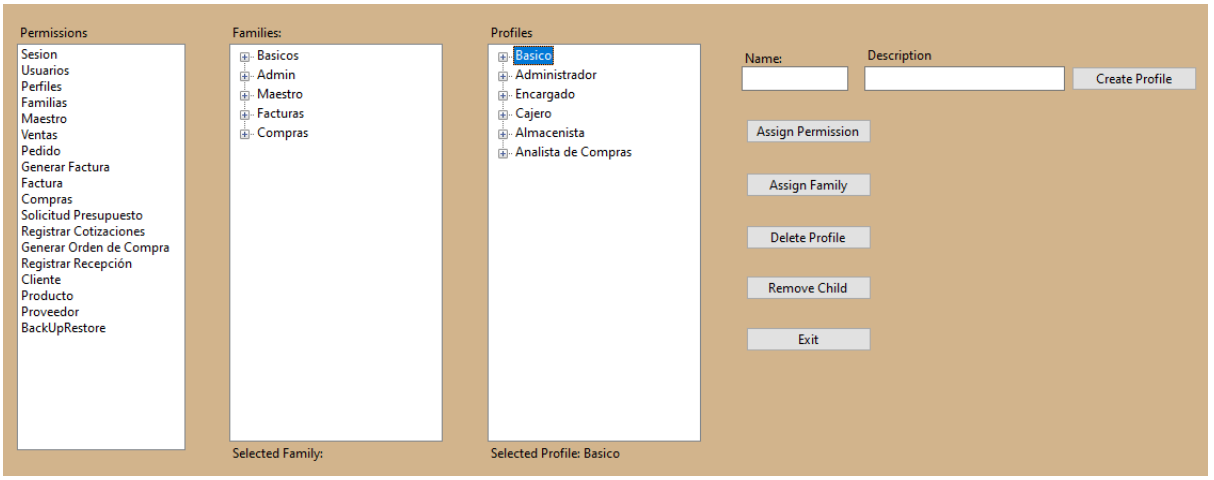
- Unlock user: Locked users are highlighted in red in the grid. To unlock a user, press the "Unlock" button, which will disable all other buttons except "Apply," "Cancel," and "Exit." Then, select a locked user from the grid and press the "Apply" button. If the user is not locked, the system will warn you that the operation cannot be performed for that reason unless the user is unlocked correctly.

- Modify User: Pressing the "Modify" button will disable all other buttons except "Apply," "Cancel," and "Exit," and will unlock the controls in the lower left corner. Then, select a user from the grid. This will populate the controls with the selected user's data. Modify the desired fields and press the "Apply" button.

- Activate/Deactivate User: Pressing the "Activate/Deactivate" button will disable all other buttons except "Apply," "Cancel," and "Exit." Then, select a user from the grid and press the "Apply" button.
  If the user is "Active," it will deactivate them. Otherwise, it will activate them.

The "Cancel" button resets the controls and enables all buttons so you can perform any action.
The "Exit" button closes the form.

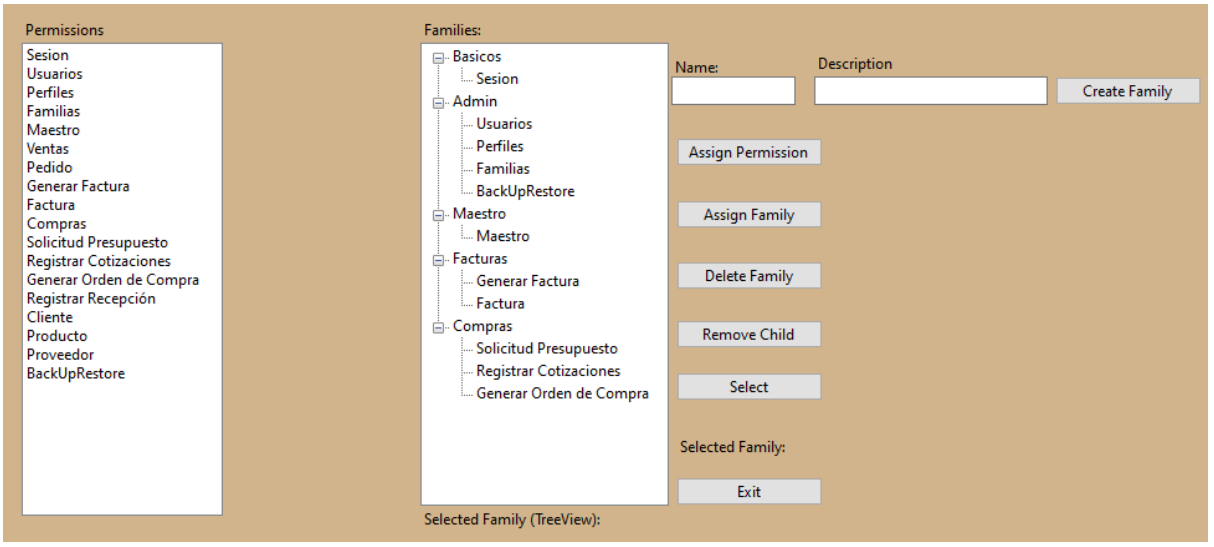
- <u>Profiles</u>:



In this section, you can create new profiles and assign them permissions or categories using the "Create Profile" button after entering the name and description in the required fields.
You cannot delete or modify a profile assigned to a user.
The profile name cannot be null or duplicated.
You cannot add a category to a profile that contains permissions the profile already has, nor can you add permissions to a profile that the profile already has.

- To assign permissions to a profile, select a permission from the permissions list and a profile from the profiles list, then click the "Assign Permission" button.
- To assign a family to a profile, select a family from the families list and a profile from the profiles list, then click the "Assign Family" button.
- To delete a profile, select a profile from the profiles list and click the "Delete Profile" button.
- To delete either a permission or a family from a profile, select the child from the profiles list and click the "Delete Child" button.

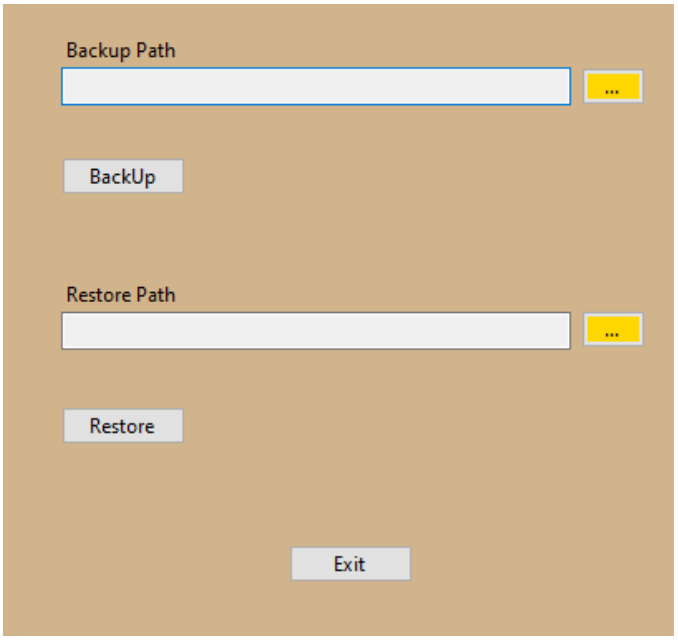
- <u>Families</u>:



In this section, you can create new families and assign permissions to them using the "Create Family" button after entering the name and description in the required fields.
You cannot delete or modify a family assigned to a profile.
The name of the family you create cannot be null or duplicated.
You cannot add a family to another family that already has permissions, nor can you add permissions to another family that already has permissions.

- To assign permissions to a family, select a permission from the permissions list and a family from the family list, then click the "Assign Permission" button.
- To assign a family to another family, select a family from the family list, click the "Select" button, select another family from the family list, and click the "Assign Family" button.
- To delete a family, select a family from the family list and click the "Delete Family" button.
- To delete either a permission or a family from a family, select the child from the family list and click the "Delete Child" button.

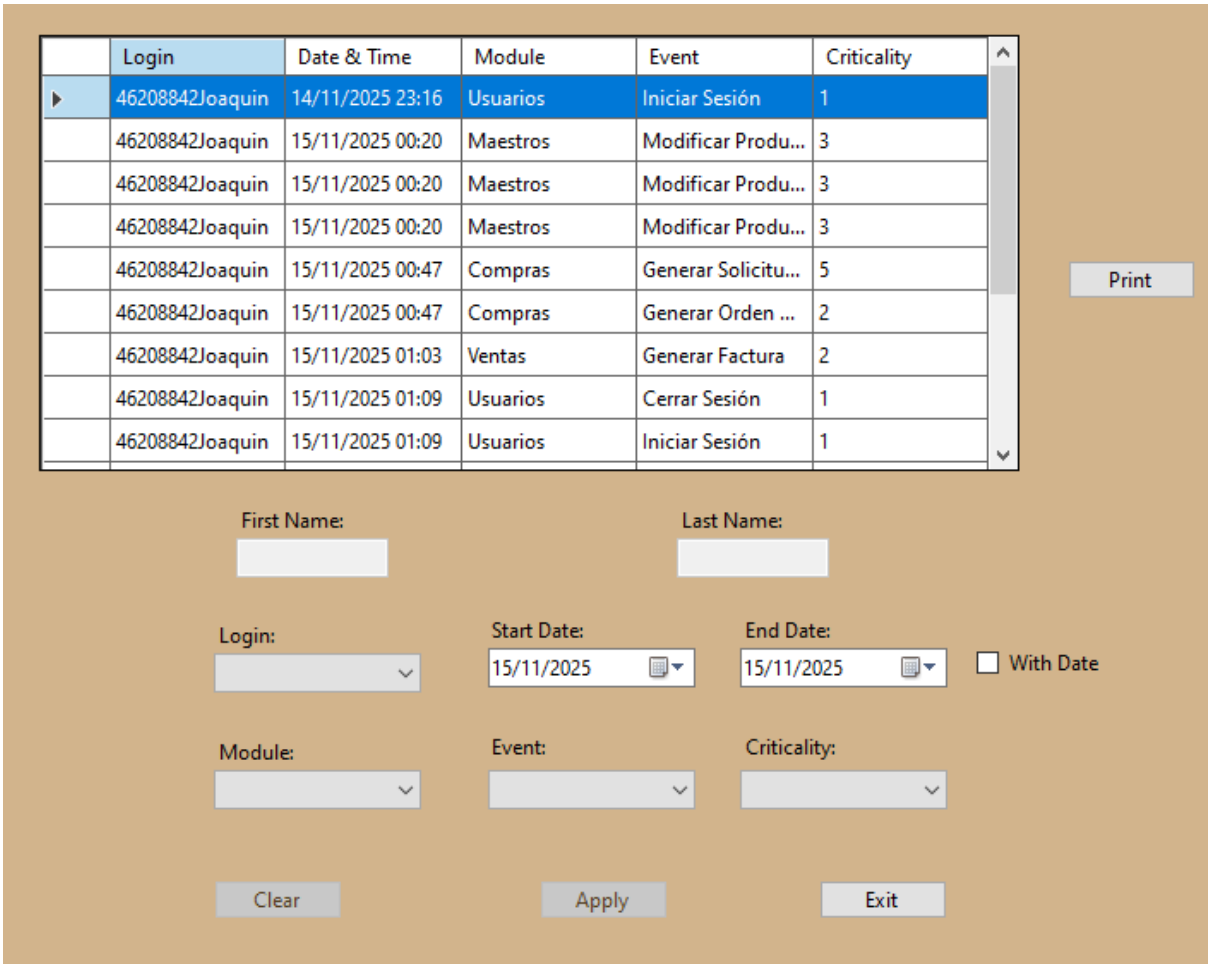
- <u>BackUp/Restore</u>:



In this section, you can back up the database to a .bak file. To do this, click the "..." button next to "Backup," which will open the file explorer. There, you can select the location to save the backup. The path to the .bak file will appear in the field below the "Backup Path" text. To perform the backup, click the "Backup" button.

You can also perform a restore to restore the database from a .bak file. Click the "..." button next to "Restore," which will open the file explorer. Select a .bak file, and its path will appear in the field below the "Restore Path" text. To perform the restore, click the "Restore" button. The restore will restore the database with the records stored in the selected .bak file.

- <u>Event Log</u>:



Opening this screen will display all relevant records of transactions performed in the last three days.
You can perform customized queries on events using the following filters:

- Login
- Date from/to
- Module
- Event
- Criticality

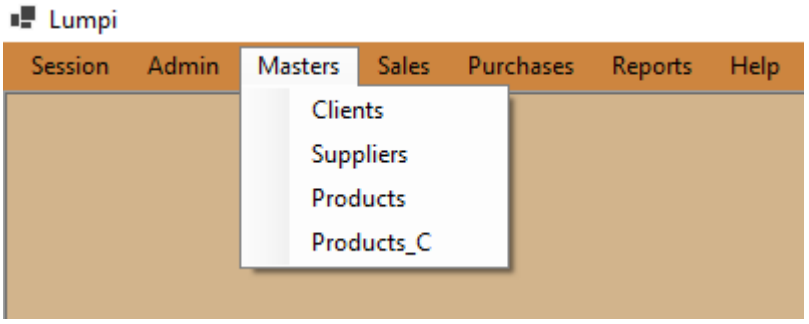
These filters can be used to perform any type of query. Records that meet the filters will appear in the grid after you click the "Apply" button.

If no events are found matching these filters, a notification will appear stating that no events were found.

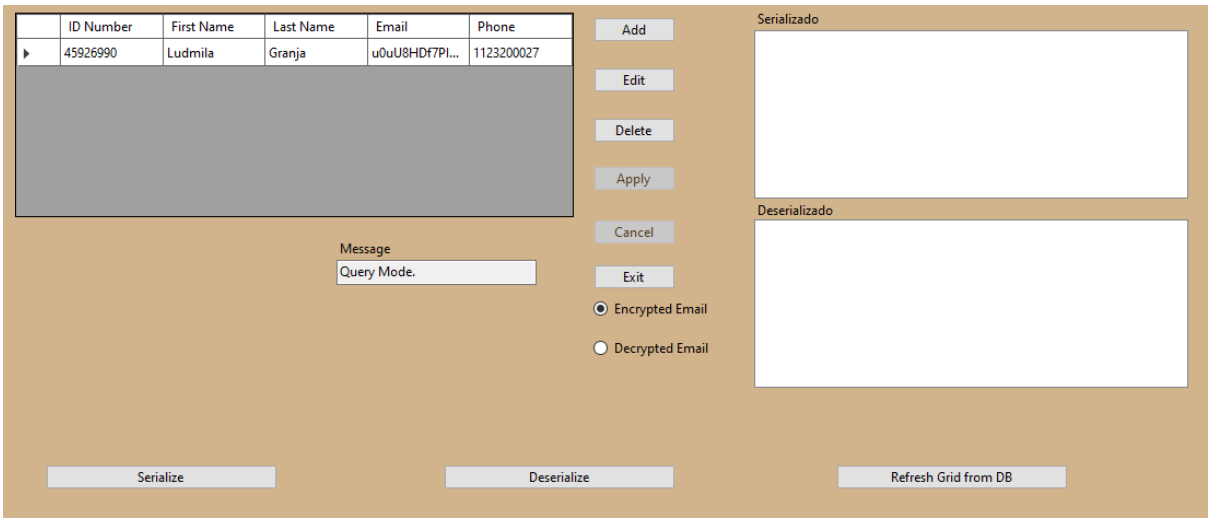
- To reset the grid to its initial state after a query, press the "Clear" button. This clears all filters and restores the grid to its original state.
- To generate a report of the events in the grid, press the "Print" button. This generates a PDF with the records currently displayed in the grid.

- When a record is selected in the grid, the first and last name fields below the grid are automatically populated with the user who performed the recorded event.
- Pressing the "Exit" button closes the form.

● Masters



- <u>Clients</u>:

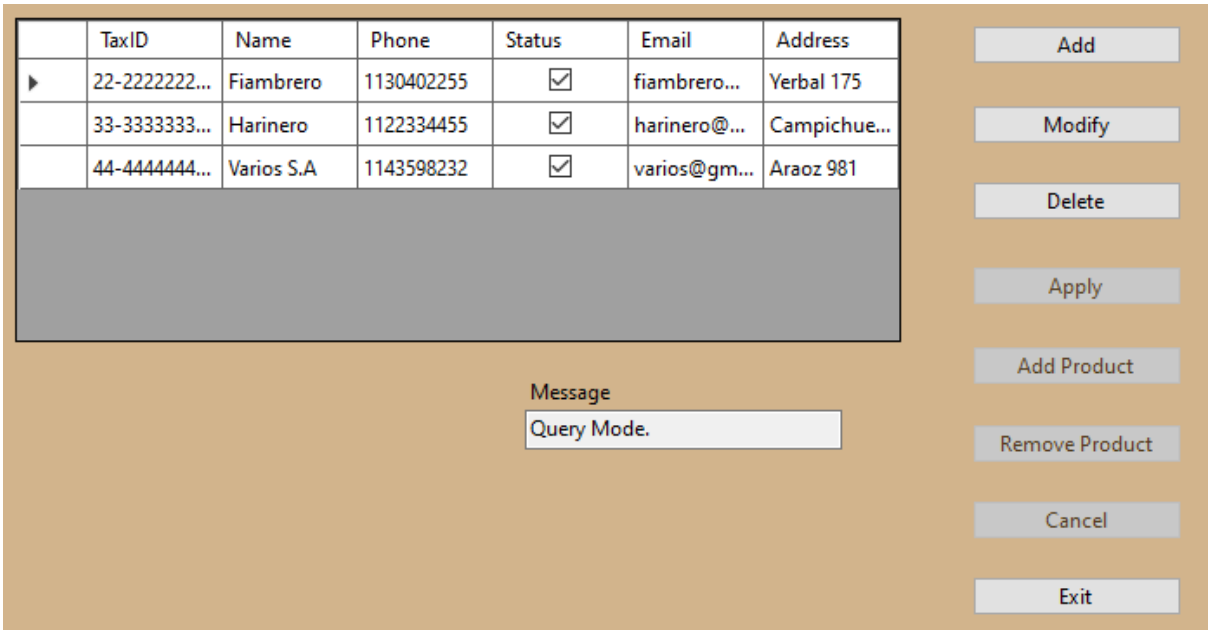


This screen displays a grid showing all clients registered in the system.
Clients can be managed through the ABM process,

- If you press the "Add" button, the necessary controls for entering customer data will appear in the lower left corner of the grid. Once entered, press the "Apply" button to register the customer.
- If you press the "Modify" button, the necessary controls for entering new customer data will appear in the lower left corner of the grid. When you select a customer from the grid, the controls will populate with the selected customer's data. To register the new data, press the "Apply" button.
- If you press the "Delete" button, select a customer from the grid and then press the "Apply" button to delete them. In this case, the deletion is automatic.

- Pressing the "Serialize" button saves an XML file to the location specified by the user through the system's file explorer. This file contains the serialized records from the grid.
- Pressing the "De-Serialize" button opens the file explorer to locate an XML file containing serialized supplier data. Once the file is selected, the grid is populated with its records, and the boxes on the right are filled with the file structure and all de-serialized customer data.
- The "Refresh Grid with Database" button resets the grid with the current system data.

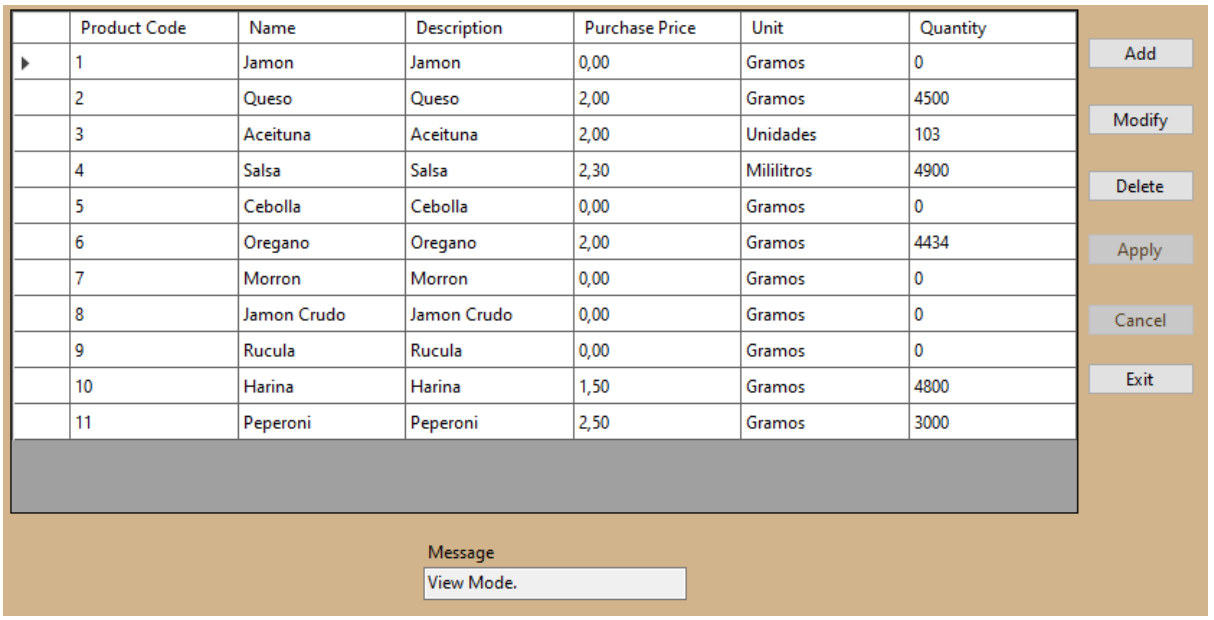
- <u>Suppliers</u>:



This screen displays a grid showing all suppliers registered in the system.
You can perform supplier management (ABM),

- If you press the "Add" button, the necessary controls for entering supplier data will appear in the lower left corner of the grid. Once entered, press the "Apply" button to register the supplier.
- If you press the "Modify" button, the necessary controls for entering new supplier data will appear in the lower left corner of the grid. When you select a supplier from the grid, the controls will populate with the selected supplier's data. To register the new data, press the "Apply" button.
- If you press the "Delete" button, select a supplier from the grid and then press the "Apply" button to remove them.
- If you press the "Add Product" button, a list of all products in the system will appear. You can add a product to a selected supplier from the grid if they are not already listed after pressing the "Apply" button.
- If you press the “Delete Product” button, you will be able to see a list with all the products in the system so that you can delete them from a selected supplier from the grid if you have one after pressing the “Apply” button.

- <u>Products</u>:



Product Code	Name	Description	Purchase Price	Unit	Quantity
1	Jamon	Jamon	0,00	Gramos	0
2	Queso	Queso	2,00	Gramos	4500
3	Aceituna	Aceituna	2,00	Unidades	103
4	Salsa	Salsa	2,30	Mililitros	4900
5	Cebolla	Cebolla	0,00	Gramos	0
6	Oregano	Oregano	2,00	Gramos	4434
7	Morron	Morron	0,00	Gramos	0
8	Jamon Crudo	Jamon Crudo	0,00	Gramos	0
9	Rucula	Rucula	0,00	Gramos	0
10	Harina	Harina	1,50	Gramos	4800
11	Peperoni	Peperoni	2,50	Gramos	3000

On this screen you can see all the products registered in the system in the grid.
You can perform product management (ABM),

- If you press the "Add" button, the necessary controls for entering product data will appear in the lower left corner of the grid. Once entered, press the "Apply" button to register the product.
- If you press the "Modify" button, the necessary controls for entering new product data will appear in the lower left corner of the grid. When you select a product from the grid, the controls will populate with the selected product's data. To register the new data, press the "Apply" button, provided the new data is consistent with the existing data.
- If you press the "Delete" button, select a product from the grid and then press the "Apply" button to remove it. In this case, the removal is logical. Note that you cannot delete any product that is assigned to a pizza, an active purchase order, or a purchase request.

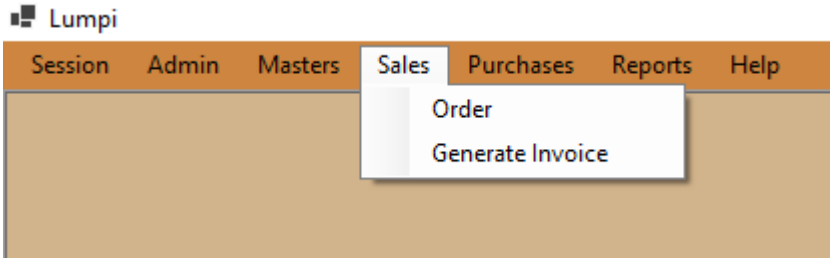
11	Peperoni	Peperoni	2,50	Gramos	3000	☑

This form is used to audit changes made to products. The grid on the left displays all changes made to products, while the grid on the right shows current products with their stock levels.
Active records specify the product's current state, while inactive records represent previous states.
The "Apply" button applies filters. You can filter by product code, product name, and modification date. If no records match the applied filters, the system will display a message.
Clicking the "Clear" button clears the filters and restores the original grid.
The "Activate" button, when a change record is selected, reverts the product to its previous state. This activates the active field for that record in the left grid and updates the product in the right grid to reflect the values of the active record.

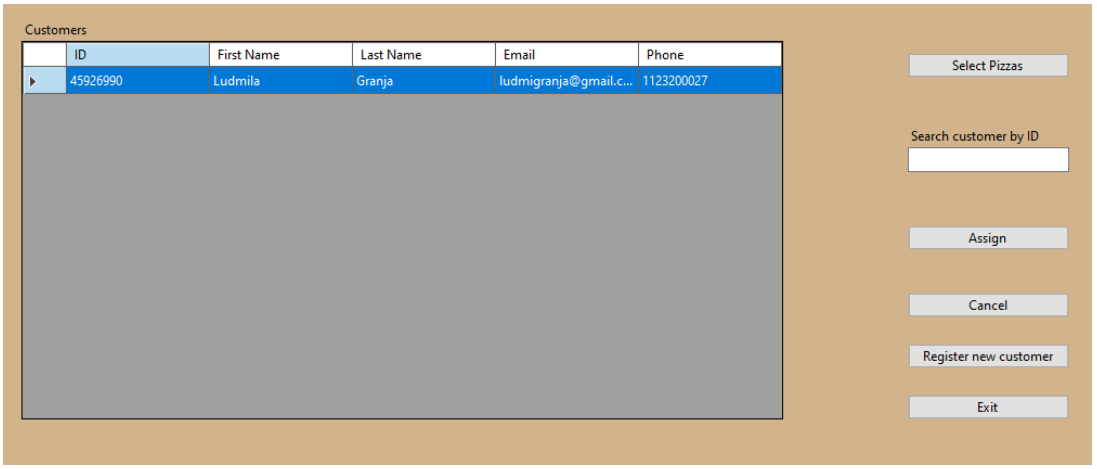
● Sales

If you have a sales-related role, such as manager or cashier, the "Sales" section will be enabled in the top bar.

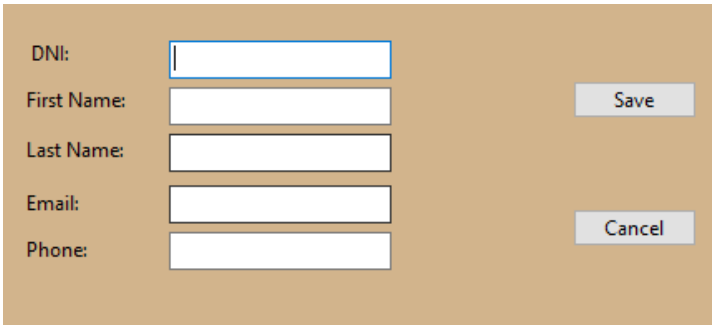


If you have the role of manager, the "Order" section is enabled, and if you have the role of cashier, the "Generate Invoice" section is enabled.

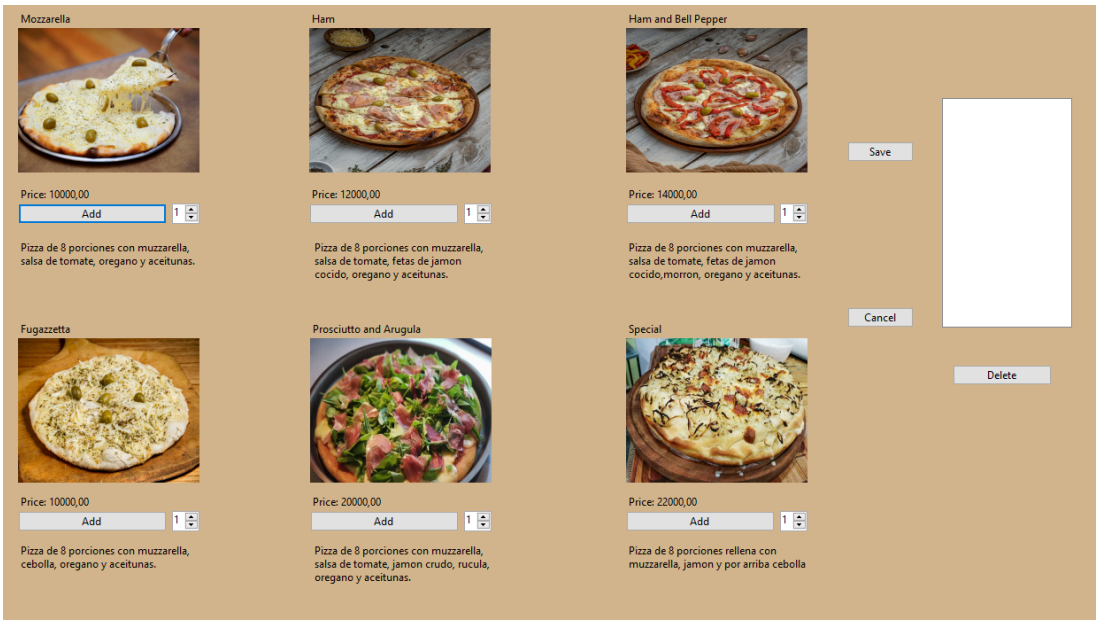
- <u>Order</u>:



This screen displays all loaded clients in the grid, which can be filtered by ID number using the control on the right if you cannot easily find it. If a client is not registered, you can press the "Register new client" button, which opens the next screen to easily register a client with their information:



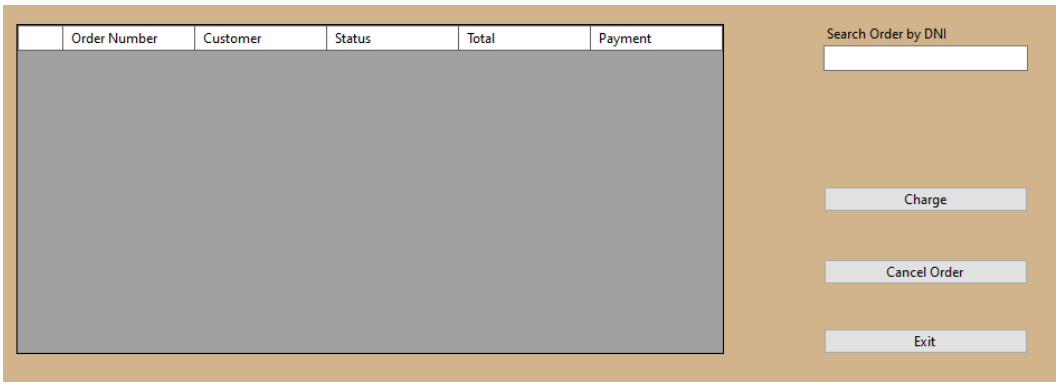
To place an order, press the “Select Pizzas” button, which will open the following screen:



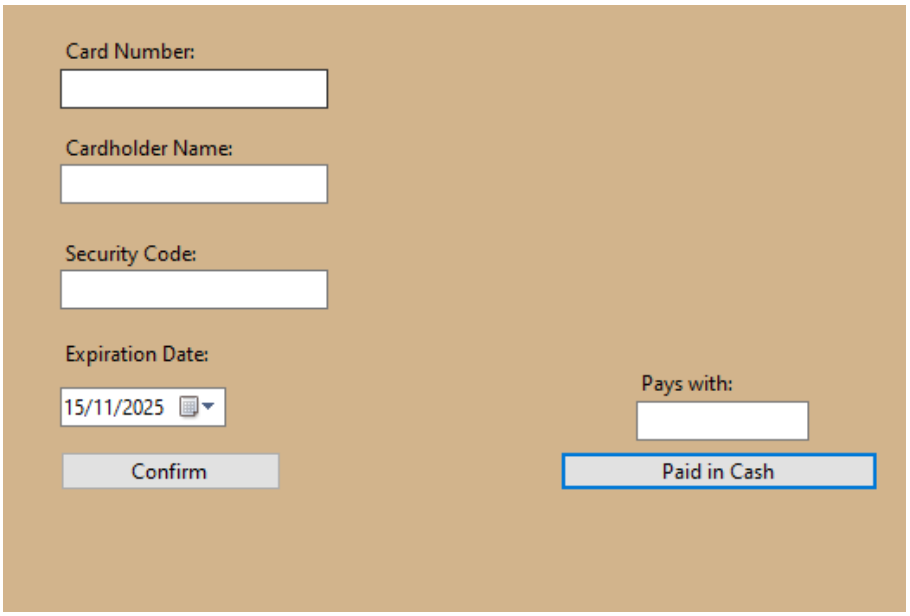
To add pizzas, press the "Add" button below the desired pizza after selecting the quantity in the adjacent control.

Once added, the pizza(s) will appear in the box on the right, allowing you to verify that they have been added correctly. If there is an error, you can select a pizza from the box on the right and press the "Delete" button to remove it.
After selecting the required pizza(s), press the "Save" button, which will return you to the previous "Order" screen.
With the pizzas loaded, select a customer from the grid and press the "Assign" button. If no pizzas are selected, an error message will appear because pizzas must be loaded first; otherwise, the order will be generated successfully.

- Generate Invoice:



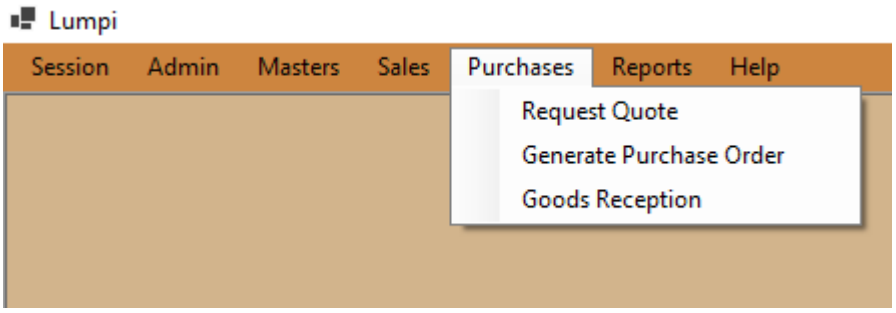
The grid displayed on this screen shows all generated orders that have not yet been paid. These can be filtered by the customer's ID number associated with the order.
If you select an order from the grid and then press the "Cancel Order" button, the order will be canceled, the grid will be updated, and the order will no longer appear.
To pay for an order, select it from the grid and then press the "Pay" button, which will take you to the following screen:



Here you must fill in the customer's payment details, either in cash or by card, and press the corresponding button. If the details are correct, the order will be charged and the order invoice will be generated, which can be viewed as a PDF that opens automatically.

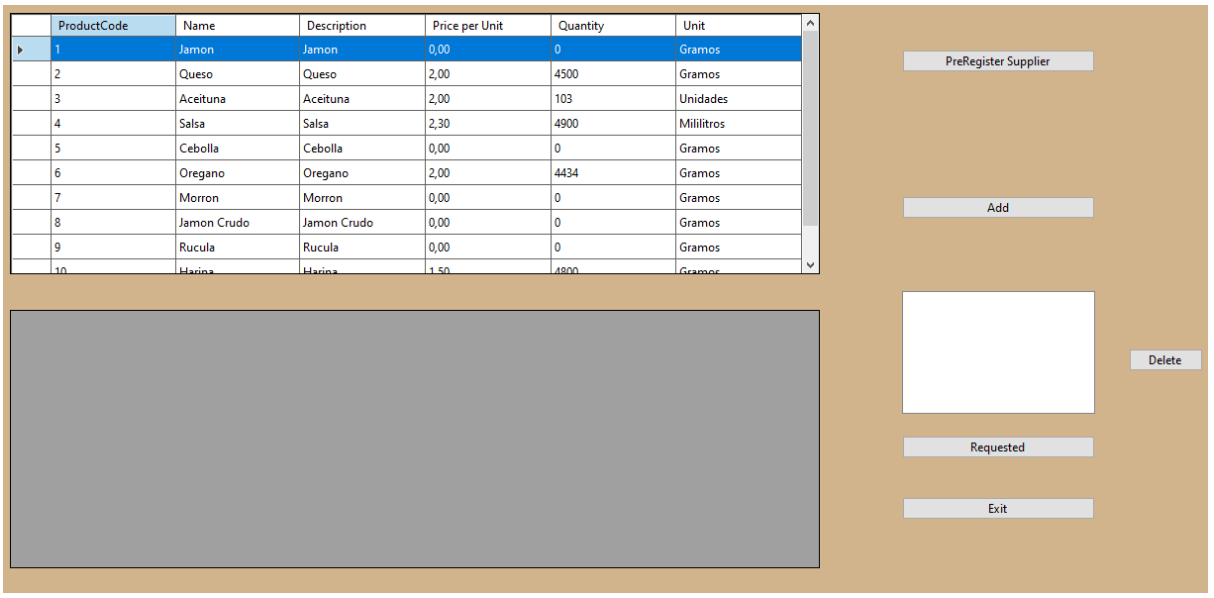
- ## Purchases

If you have a purchasing-related role, such as purchasing analyst or warehouse worker, the "Purchasing" section will be enabled in the top bar.

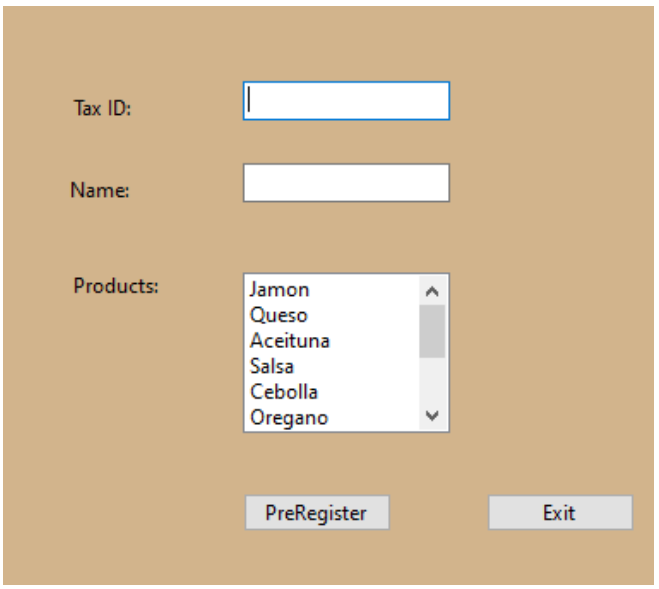


If you have the role of purchasing analyst, the "Request a Quote" and "Generate a Purchase Order" sections are enabled, and if you have the role of warehouse worker, the "Receipt of Goods" section is enabled.

- <u>Request a quote</u>:

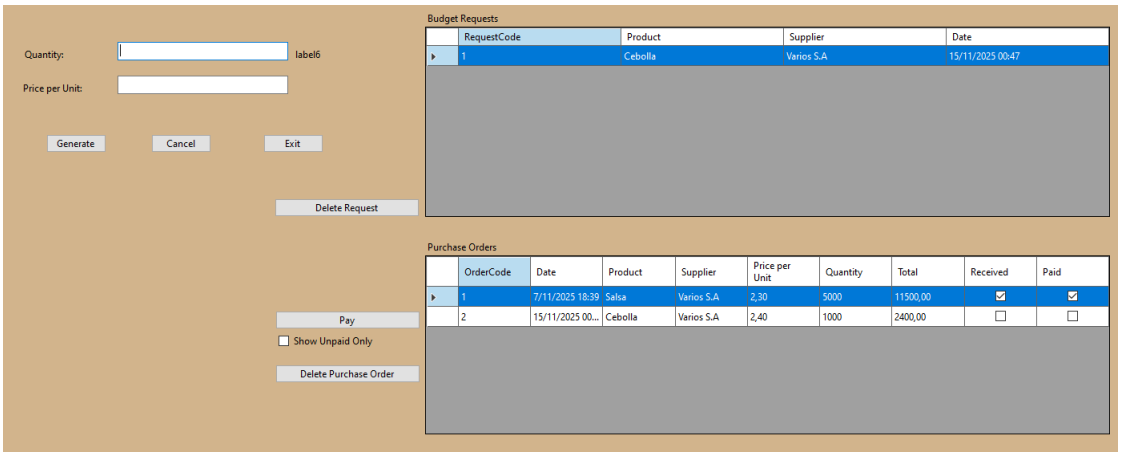


On this screen, the top grid displays the products that are loaded into the system, and the bottom grid shows the suppliers that provide a selected product.
If you wish to request a quote from a supplier who is not registered, you must first pre-register them. This is done by pressing the "Pre-Register Supplier" button, which opens the following screen:



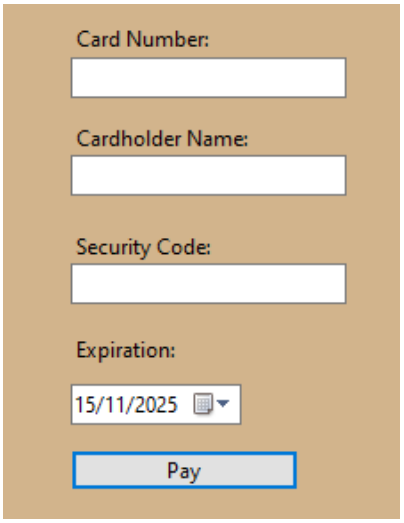
Here you must complete the supplier's basic information and the products they supply.
To submit a request, select a product from the grid above and press the "Add" button. This will add the selected product to the box below the button.
Once the product is in the blank box, select it. The suppliers who supply that product in the system will then appear in the grid below. Select one of the suppliers from the grid below and then press the "Requested" button. If there is no active request to that supplier for that product, the request will be saved correctly.

- <u>Generate Purchase Order</u>:



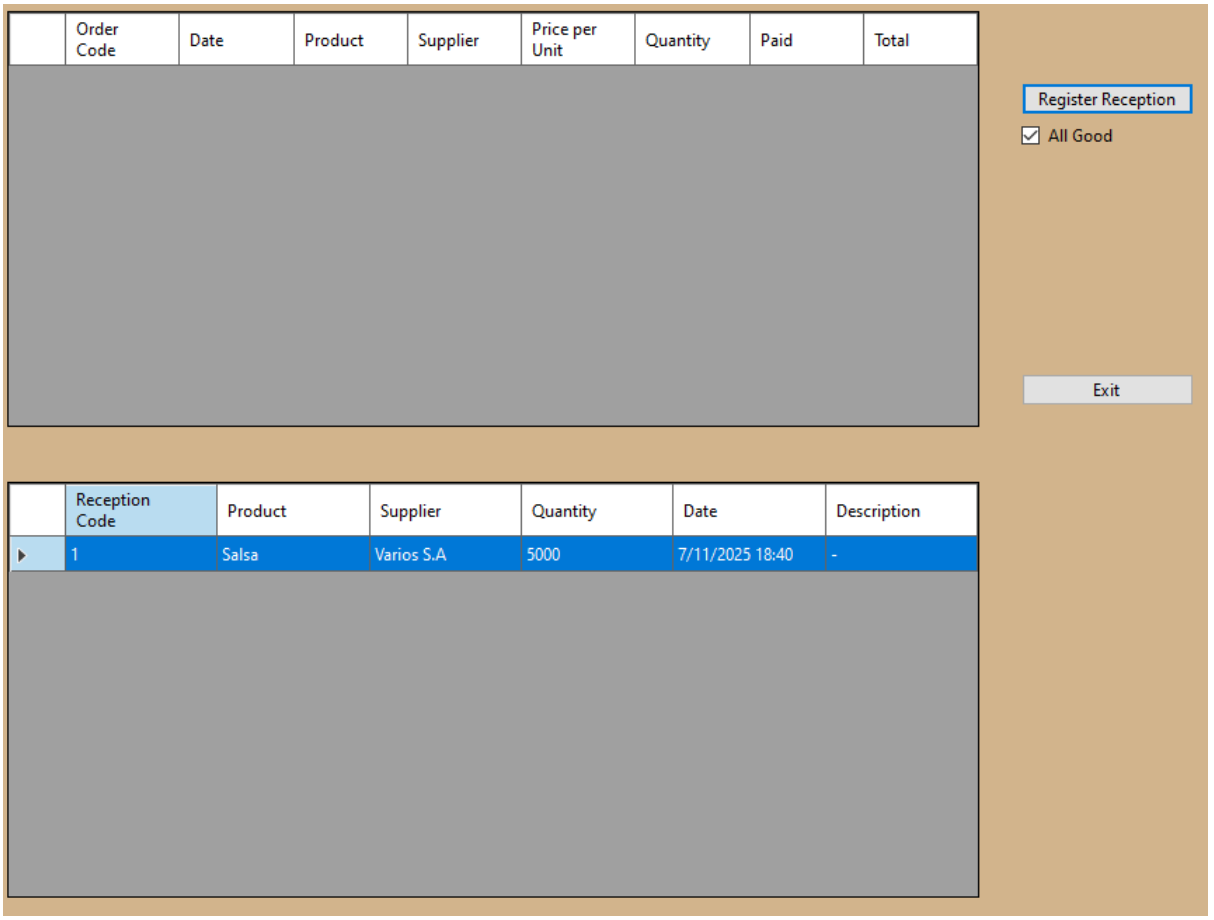
This screen displays two grids. The top grid shows active budget requests, which are those submitted within the last 15 days. After that, they are considered expired and must be resubmitted.
To generate a purchase order, select a purchase request from the top grid. The system will then retrieve the supplier and product information from this request. Once the request is selected, complete the fields in the upper left corner, which require the quantity and price per unit of product. After entering the data, click the "Generate" button.

If the order being generated is for a pre-registered supplier, you will be prompted to complete the supplier's full information. If this information is not provided, the order will not be generated.
Otherwise, the order will be generated and displayed in the grid below.
To cancel a purchase order, select an unpaid order from the grid below and then click the "Delete Purchase Order" button.
To pay a purchase order, select an unpaid order from the grid below. To filter for unpaid orders, there is a control on the left side of the grid. Click this control, and the grid will update to show only unpaid orders.
After selecting the unpaid order, click the "Pay" button, which will open the following screen:



Here you must enter your card details and press the "Pay" button.
To generate a PDF report of your purchase orders, double-click on the order you wish to generate the report for.

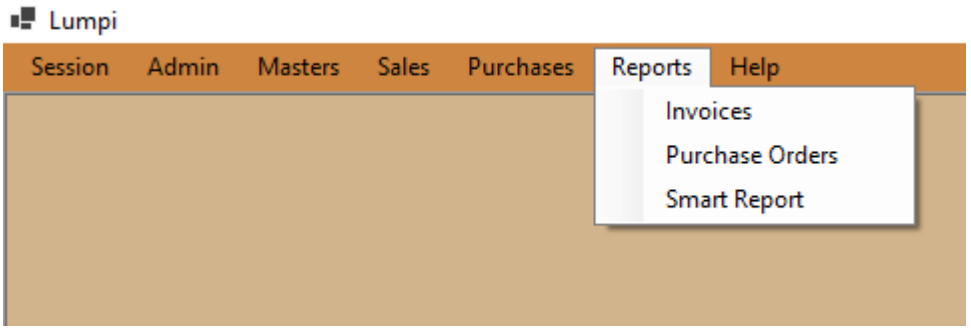
- <u>Receiving Merchandise</u>:



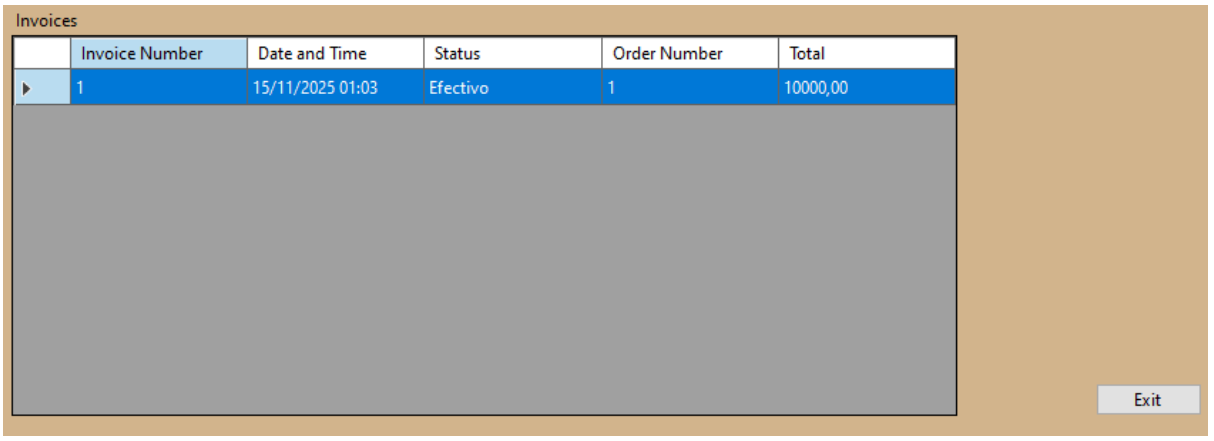
This screen displays two grids. The top grid shows all purchase orders that have been paid but not yet received, and the bottom grid shows all merchandise receipts.
To register that merchandise has been received, select a purchase order from the top grid. Then, retrieve the product, quantity, and price, as well as the supplier from whom the order was generated.
If there were no errors in the merchandise sent by the supplier, leave the "All OK" checkbox selected and click the "Register Receipt" button. This will correctly register the receipt and update the bottom grid with the new receipt record. If the supplier has not sent the requested merchandise correctly, the "All Ok" checkbox should be unchecked and two text boxes will appear in which you must fill in the description of what happened and the new quantity that was received of the requested product and then press the "Register Receipt" button, which registers the receipt and updates the grid below with the new receipt record.

● Reports

In this section you can access the "Invoices", "Purchase Orders" and "Samart Report" reporting sections.

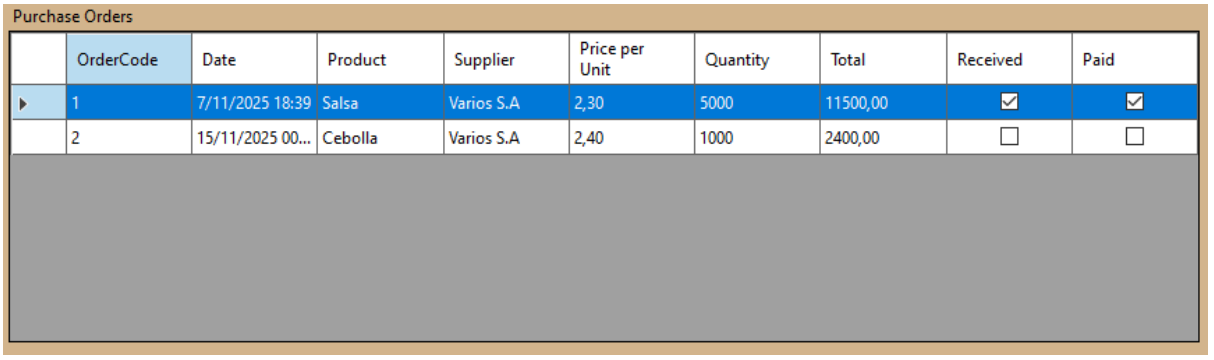


- Invoices:



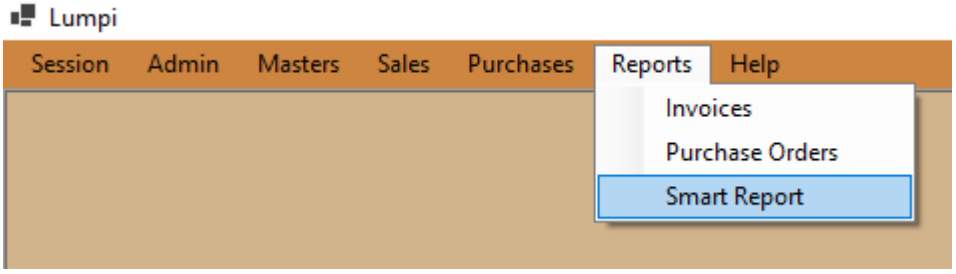
This screen displays a grid with all the invoices; if you double-click on any invoice, a PDF will open showing the invoice details.

- Purchase Orders:



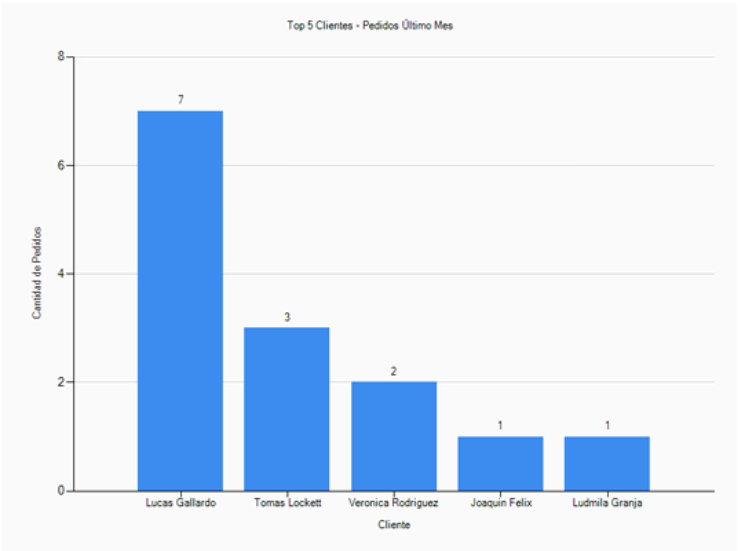
This screen displays a grid with all purchase orders; double-clicking on any order opens a PDF showing the details of the purchase order.

- <u>Smart Report</u>:



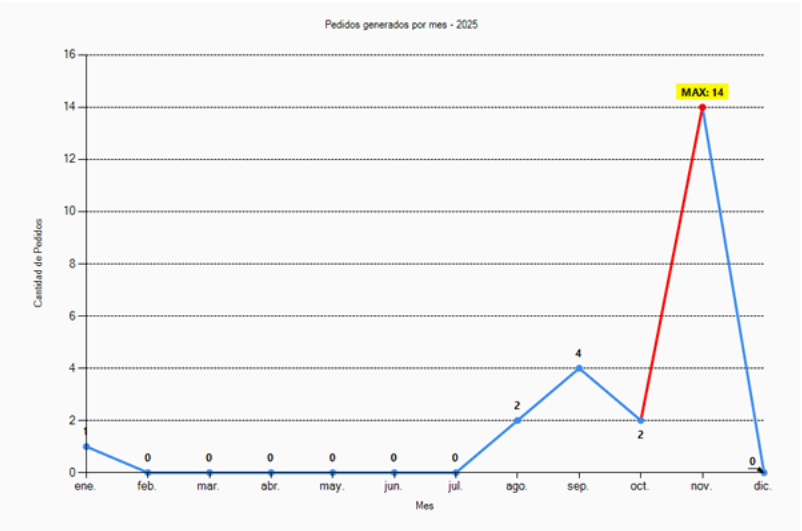
Clicking on the “Smart Report” button will open a PDF file showing three graphs. The first graph will show which customers placed the most orders last month, highlighting the customer names and the quantity they placed. For example:

Top Clientes del Último Mes



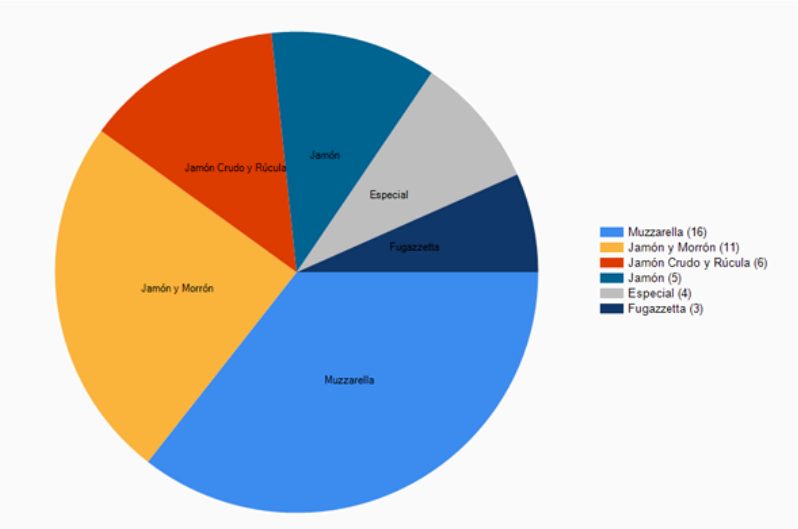
The second chart will show order sales per month for the current year, for example:

Ventas por Mes (Año Actual)

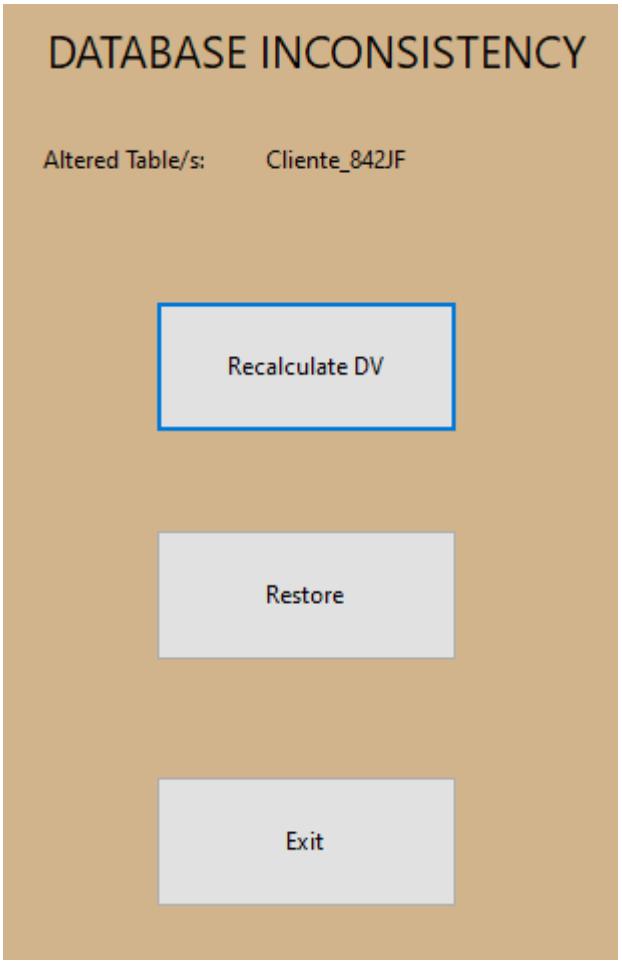


And finally, the third one will show a graph indicating how many of each pizza were sold in the last three months, for example:

Pizzas Más Vendidas Últimos 3 Meses



- **Data Inconsistency**



If you log in and there has been a data modification in a business table, and you have administrator privileges, the following screen will open, displaying the affected table(s):
In this situation, the system offers three options:

- Recalculate DV: The check digit is recalculated using the current values in the database, and the new check digit is saved. The system informs the user that the recalculation was successful and closes the session.
- Restore: The file explorer opens, allowing the user to select a backup .bak file and recover old data that was not externally altered. The system informs the user that the database has been restored and closes the session.
- Exit: The session closes without resolving the inconsistency.
